Profile

Passionate MERN stack developer who loves building clean, functional web applications. I enjoy the process of figuring things out, whether it's making an interface more user-friendly or debugging code. With each project, I try to improve both how things look and how they work. I'm still early in my journey, but I'm constantly learning, building, and leveling up.

Projects

ProCtrl   proctrl.vercel.app
A fully responsive eCommerce web app. Includes features like product filtering, cart management, secure checkout, and real-time inventory tracking. Built with React, Node, and MongoDB with Mongoose for storage, and implemented CORS for security.

DetectScam   detectscam.vercel.app
An AI-powered tool that helps users detect scam messages. Supports real-time analysis with a clean, supportive UI focused on digital safety.

WriteNow   hackathon.web.app
A simple article-creating app powered by Firestore. Syncs notes instantly with a minimal interface. Firebase user creation, Log-In and Sign-Up Authentication.

More:
